

# INTRODUCTION TO ESOTERIC CHRISTIANITY

## A STEP TO THE FUTURE, NOT A RELIGION

- Toowoomba City Library. Cnr Herries & Victoria St, TOOWOOMBA

- Presented by: Hamish Mackay

Sunday 25<sup>th</sup> November, 2018. 9am - 4pm

---

The traditional Christian school system provides many good experiences where interesting and important cultural norms can be learnt. However children often leave school with more knowledge than they can comprehend and with a distinct feeling that little of it makes sense. What was taught on Sundays is not always reflected in practice over the other 6 days.

The study of spiritual science allows us to move from provided dogmas and restricted belief thinking towards a greater comprehension and appreciation of the world in which we live. We can move from belief to understanding.

This workshop will be an interactive sharing of Hamish's journey from an expected belief/disbelief approach to Christianity towards a growing understanding of individual spiritual growth and opportunity. Christianity as a path of development for both human beings and the planet, rather than a belief system, one that recognizes the individual as a microcosm of the macrocosm.

We look out into the starry realm at night and can be moved by its power and beauty. Once someone shows us, for example, the Southern Cross we can no longer look out without seeing it. It then becomes an individual choice and path to understand the meaning and purpose of the Southern Cross - or any other star/planet/constellation.

This workshop is intended to open a path to a future founded on *Freedom* and *Love*, not to replace one set of beliefs with another.

Hamish Mackay was educated in an Anglican tradition and introduced to biodynamics as part a more comprehensive world of Christianity in his early 20's. He has been a student of spiritual science for over 40 years, working at the Demeter Bakery in Sydney, the Blackthorn Trust in the UK with the mentally and chronically ill, was a founding member of Biodynamic Agriculture Australia and is currently executive director of Biodynamis2024. In a world in turmoil there is the potential to pick up on the long-term trends and work with the Spirit of the Age to face the challenges of the times.
